## B.TECH. DEGREE EXAMINATION, MAY 2014

Sixth Semester<br>Branch : Electronics and Communication Engineering<br>EC 010601 - DIGITAL COMMUNICATION TECHNIQUES (EC)<br>(New Scheme - 2010 Admission onwards)<br>[Regular/Improvement/Supplementary]

Time : Three Hours
Maximum : 100 Marks

> Part A
> Answer all questions briefly.
> Each question carries 3 marks.

1. What is Correlation? Explain the different types.
2. Explain a ML Receiver.
3. What is Companding? Explain.
4. What is the need of equalizer in digital transmission? Briefly explain.
5. Explain about BPSK Signal.

## Part B

Answer all questions.
Each question carries 5 marks.
6. Write the differences between :
(a) Sample function and Random process.
(b) Wide sense stationarity and Strict sense stationarity.
7. Write the properties of matched filter receiver.
8. With a diagram, explain the generation of PPM Signal.
9. Explain modified duobinary signalling scheme.
10. Explain about Trellis coded modulation.

# Part C <br> Answer all questions. <br> Each question carries 12 marks. 

11. With a suitable example, explain Gram-Schmidt orthogonalization procedure.
12. (a) Derive the mean and auto correlation function at the output of a LTI System when a Stationary random process $X(t)$ is given at the input.
(b) Write the properties of P.S.D.

$$
(8+4=12 \text { marks })
$$

13. (a) With a neat block diagram, explain the operation of a matched filter receiver.
(b) Briefly explain a method to detect signals with unknown phase in noise.

$$
(7+5=12 \text { marks })
$$

Or
14. (a) Derive the likelihood equation of ML estimation.
(b) Write the difference between Correlation receiver and a Matched filter receiver.
15. State and prove Sampling theorem.

$$
(7+5=12 \text { marks })
$$

## Or

16. (a) With an example, explain quantization in PCM.
(b) Explain with a block diagram, the working of adaptive delta modulator.

$$
(6+6=12 \text { marks })
$$

17. What is ISI? What is the reason for ISI? Explain the Nyquist criterion for distortionless base band binary transmission.
18. (a) Explain the following :
(i) Bit synchronization.
(ii) Frame synchronization.
(b) What is eye pattern? Explain.

$$
(8+4=12 \text { marks })
$$

19. Draw the transmitter, receiver block diagrams of BFSK system. Also write the basis functions, signal constellation points and also draw the signal space diagram.

## Or

20. Explain:
(i) M-asy PSK system.
(ii) M-asy QAM.

$$
\begin{aligned}
(6+6 & =12 \text { marks }) \\
{[5 \times 12} & =60 \text { marks }]
\end{aligned}
$$
